

BITSIGHT CONNECTOR

ProcessUnity's pre-built connector to the BitSight Security Ratings Platform supplements your IT security risk assessments with objective cybersecurity ratings and rankings for an even more complete view of your third-party vendor population. The integration incorporates BitSight's continuous security performance measurements into your assessment process to facilitate more rigorous due diligence, performance reviews and SLA monitoring.

The Service

The BitSight Security Rating Platform delivers timely, data-driven insights into the security performance of third parties. Using externally observable, non-intrusive data and methods, BitSight analyzes the third party's cybersecurity posture — taking into account security controls, policies, and more than 20 risk vectors — and applies sophisticated algorithms to generate daily security ratings ranging from 250 to 900. Lower numbers correlate to a higher risk of data breach.

ProcessUnity's cloud-based third-party risk management solution identifies and remediates risks posed by third-party service providers. Combining a powerful vendor services catalog with centralized risk process automation and dynamic reporting, the platform streamlines third-party risk activities while capturing key supporting documentation to ensure compliance and fulfill regulatory requirements. To learn more about Third-Party Risk Management, go to www.processunity.com/automate.

Risk Factors - Ratings

BitSight - Compromised Systems

Botnet Infections Rating 810	Botnet Infections Grade A
Spam Propagation Rating 570	Spam Propagation Grade F
Malware Servers Rating 700	Malware Servers Grade C
Unsolicited Comm Rating 530	Unsolicited Comm Grade F
Potentially Exploited Rating 500	Potentially Exploited Grade F

BitSight - User Behavior

File Sharing Rating 700	File Sharing Grade C
-----------------------------------	--------------------------------

BitSight - Diligence

SPF Rating 490	SPF Grade F
DKIM Rating 660	DKIM Grade C
TLS/SSL Certificates Rating 600	TLS/SSL Certificates Grade D

Risk Vectors - Grades

TLS/SSL Configurations Rating 510	TLS/SSL Configurations Grade F
Open Ports Rating 500	Open Ports Grade F
Application Security Rating 490	Application Security Grade F
Patching Cadence Rating 660	Patching Cadence Grade C
DNSSEC Rating 820	DNSSEC Grade A
Insecure Systems Rating 820	Insecure Systems Grade A
Server Software Rating 580	Server Software Grade F
Desktop Software Rating 820	Desktop Software Grade A
Mobile Software Rating 660	Mobile Software Grade C
Public Disclosures Rating 820	Public Disclosure Grade A
Data Breaches Rating 670	Data Breaches Grade C

BitSight takes into account security policies, controls and more than 20 risk vectors which are visually represented as grades or ratings within ProcessUnity.

By integrating BitSight Security Ratings into the ProcessUnity Third-Party Risk Management platform, you gain enhanced visibility into the cybersecurity risks associated with existing and potential third-party business partners to drive more informed decision making.

The Integration

ProcessUnity offers a pre-built connector that seamlessly integrates BitSight Security Ratings into our Third-Party Risk Management platform, using each vendor's BitSight ID — eliminating the need to manually enter, recalculate risk scores, and/or continually update information on each organization being assessed. The connector allows you to view current security ratings directly within the ProcessUnity platform without having to move back and forth between a cybersecurity risk monitoring solution and third-party platform. A direct URL link allows users to easily access real-time BitSight vendor reports to view details behind each risk vector. Additionally, the ratings and/or scores from BitSight can be incorporated into an overall risk calculation inside of the ProcessUnity platform. This includes additional cybersecurity data points such as questionnaires within ProcessUnity or span across additional risk domains outside of cybersecurity. You can also create notifications based on thresholds being met or other automated actions to trigger downstream workflow.

The BitSight Connector lets you achieve integration easily which eliminates lengthy waits for IT resource availability. You'll partner with our Customer Success organization to define the ratings you want to pull into the ProcessUnity platform (based on your specific BitSight Security Ratings subscription) and the frequency of data transfer. Our experts will build the data import templates and configure the required reports that articulate which vendor participates in the automated refresh. Once the connector is set up and active, BitSight Security Ratings will be automatically populated within the ProcessUnity solution on a pre-defined schedule to enhance your Third-Party Risk Management program.

The Requirements

ProcessUnity's BitSight Connector is available for an annual subscription fee and requires a BitSight Security Ratings subscription. Your ProcessUnity representative will provide BitSight contact details upon request.

BitSight Connector

Businesses operate in an increasingly complex world. Determining which companies in your third-party ecosystem are healthy and which are at risk is difficult. To keep up, you need to anticipate risk across your entire enterprise. Few analytical tools help grasp the strengths, weaknesses, and trends of your key business relationships. BitSight makes it simple.
